Chandigarh, India

Summary

Full-stack developer who has shipped three production web apps (React/FastAPI/PostgreSQL) live on real URLs, not just localhost demos. Comfortable owning a feature end-to-end: schema design, API, RLS/auth, and deployment. Looking for a SDE/full-stack role where I can work on systems at higher scale than a solo-project.

Education

Chandigarh University

B.E. Computer Science Engineering (AI & ML Specialization) — CGPA: 8.16

Mohali, Punjab

Aug 2023 – Jan 2027

Hari Bhoomi Sr. Sec. School

Class XII — 84%

Jind, Haryana

2023

Experience

Full Stack Web Development Intern

Webstack Academy (MERN Stack)

Mar 2026 – Apr 2026

Remote

- Built and shipped **REST APIs** consumed by the **React** frontend; fixed [N] data-consistency bugs caused by mismatched frontend/backend schema assumptions — *replace [N] with a real count or a specific example bug.*
- Designed **SQL** and **MongoDB** schemas and CRUD endpoints; validated all endpoints in **Postman** before handoff, cutting integration bugs caught late in the cycle.

Projects

ScolAR — AI-Powered Exam Preparation Platform (React 19, FastAPI, PostgreSQL, Supabase) — [Live](#) | [GitHub](#) 2026

- Built a full-stack exam prep platform serving [N] active users, with multi-tenant **PostgreSQL** schemas secured via **Row-Level Security** so each student/institution only sees their own data.
- Automated academic data sync with **Selenium**, replacing a manual process that previously took [X hours/week — fill in real estimate].
- Integrated **Razorpay** for payments and built an admin dashboard for platform operations.

StockPulse — Retail Inventory Analytics Platform (React, FastAPI, PostgreSQL, Material UI) — [Live](#) | [GitHub](#) 2026

- Built an inventory analytics platform over 3,700+ products, using **CTEs**, **window functions** (RANK, LAG), **materialized views**, and **triggers** to compute stock trends and reorder signals in real time rather than via manual spreadsheet review.
- Implemented **JWT-based RBAC** so managers and staff see role-appropriate views of the same data.
- Designed a normalized schema and REST API layer supporting the full dashboard — *if you have a query-time or page-load number, add it here, it's a strong signal for a data-heavy role.*

LectureCapture AI — AI-Powered Study Sheet Generator (React, FastAPI, Mistral AI, Material UI) — [Live](#) | [GitHub](#) 2026

- Built a pipeline converting uploaded video/audio/PDF lectures into structured study sheets via a provider-abstracted **LLM** layer (swap AI providers without touching calling code).
- Shipped PDF export, Markdown copy, and CI/CD via Vercel — live and usable end-to-end, not a notebook demo.

Technical Skills

Languages: C, C++, Python, JavaScript, TypeScript, SQL

Frontend: React, Next.js, Tailwind CSS, Material UI

Backend: FastAPI, Node.js, REST APIs, JWT Auth

Databases: PostgreSQL, Supabase, MongoDB — schema design, query optimization, RLS

Tools: Git, GitHub, Postman, Docker, Linux, Selenium, Vercel

Achievements & Certifications

Top 50 of 10,000+ teams, Graph-E-Thon 3.0 National Hackathon (2026).

Class Representative for 70+ students — primary faculty-student liaison for 1.5+ years.

Microsoft Azure AI Fundamentals (AI-900)
